Laboratory Confirms That SafeGlo222 Ultraviolet Destroys Covid-19 Virus

Prestigious CSIR Laboratory states that SafeGlo ultraviolet quickly kills Covid-19 Virus, safely disinfecting both air and surfaces

For Immediate Release -

Guangdong, China, 24 June 2021 GMY Lighting Technology announced today that the company's SafeGlo222 ultraviolet lamps had been proven to kill SARS CoV-2, the virus that causes Covid-19.

"We have known that our SafeGlo222 ultraviolet disinfects airborne and surface viruses with no harmful human side effects," said Mr. Hong Yannan, chairman of GMY. "These new results from the internationally recognized CSIR Laboratory confirm that our unique technology also destroys the specific virus responsible for the covid epidemic."

The tests were performed by the globally respected CSIR Laboratory, based in Pretoria, South Africa. The subjects were ultraviolet disinfection units produced by Far UVC Africa, which are powered by GMY's SafeGlo222 ultraviolet lamps. CSIR grew live covid virus in its laboratory, and then exposed the living virus to SafeGlo222 Far UVC ultraviolet light. They found that exposures as short as 15 minutes completely eliminated the virus. CSIR issued a statement saying that its results "confirm that the Far UVC light generated by this device can destroy SARS CoV-2."

As the threat of Covid-19 grew worldwide, GMY responded by dedicating its factory to the production of SafeGlo ultraviolet products, shipping tens of thousands of critically needed units throughout China and around the world. "We had confidence that our SafeGlo products were beneficial, but we grateful to be know that our efforts actually killed Covid-19, and thus truly reduced the spread of the epidemic," Mr. Hong concluded.

About GMY Lighting

GMV Lighting is more than a world leader in the development and distribution of ultraviolet lighting products. Since 1998, GMY Lighting has been recognized worldwide for its outstanding product technology, excellent product quality and thoughtful customer service. In addition to ultraviolet lights, GMY offers general lighting, automotive lighting, and specialty light sources health equipment, disinfection applications, and horticultural lighting. GMY is proud to have formed supplier partnerships with Phillips, Far UVC Africa, and dozens of other manufacturers around the world
